                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Issued Patents Ah:*

Sequence 7, Application US/09381687

Patent NO. 6486113

GENERAL INFORMATION:

APPLICANT: HATADA, Yuji
APPLICANT: HATADA, Yuji
APPLICANT: TO, Susumu
APPLICANT: HAGHARA, Hiroshi
APPLICANT: HAGHARA, Miroshi
APPLICANT: ARAKI, Hiroyuki
APPLICANT: ARAKI, Hiroyuki
APPLICANT: OZAKI, Katsuya
TITLE OF INVENTION: MUTANT ALPHA-AWYLASES
FILE REFERENCE: 2173-0115P
CURRENT APPLICATION NUMBER: US/09/381,687
CURRENT FILING DATE: 1999-09-23
NUMBER OF SEQ ID NOS: 25
SOFTWARE: PATENTIN VERSION 3.0

SEQ ID NO 7
LENGTH: 515
TYPE: PRT
CRGANISM: B. stearothermophilus

                                                                     0
                                                                                                                                                                                                                                                                                         Sequence 6, Application US/09854346
; Sequence 6, Application US/09854346
; Patent No. US202006835ZA1
; GENERAL INFORMATION:
APPLICANT: No. US2002006835ZA1ozymes A/S
APPLICANT: Svendsen, Allan
APPLICANT: Jorgensen, Christel Thea
APPLICANT: Nielsen, Bjarne Ronfeldt
TITLE OF INVENTION: Alpha-amylase variants with altered 1,6
FILE REFERENCE: 6140.200.US
; CURRENT APPLICATION NUMBER: US/09/854,346
; CURRENT FILING DATE: 2001-05-11
NUMBER OF SEQ ID NOS: 15
; SOFTWARE: PatentIn version 3.1
; SEQ ID NO
; LENGTH: 515
TYPE: PAT
ORGANISM: Bacillus stearothermophilus

US-09-918-543-6

Sequence 6, Application US/09918543

Patent No. US20020155574A1

GENERAL INFORMATION:
APPLICANT: Thisted, Thomas
APPLICANT: Moisted, Thomas
APPLICANT: Kjaerulff, Soren
APPLICANT: Kjaerulff, Soren
APPLICANT: Fuglang, Claus Crone
TITLE OF INVENTION: Alpha-amylase mutants with altered properties
FILE REFERENCE: 10062.200-US
CURRENT APPLICATION NUMBER: US/09/918,543

CURRENT FILING DATE: 2001-07-31

NUMBER OF SEQ ID NOS: 30
SOFTWARE: PatentIn version 3.1

SEQ ID NO 6
LENGTH: 515
TYPE: PRT
ORGANISM: Bacillus stearothermophilus
                                                                                                                                                                                                                                                                    8

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

alpha-amylase (EC 3.2.1.1) precursor - Bacillus sp.

N;Alternate names: 1,4-alpha-D-glucan glucanohydrolase; G6-amylase
C;Species: Bacillus sp.
C;Date: 31-Mar-1989 #sequence\_revision 18-Aug-1995 #text\_change 18C;Accession: A27705
R;Tsukamoto, A.; Kimura, K.; Ishii, Y.; Takano, T.; Yamane, K.
Biochem. Biophys. Res. Commun. 151, 25-31, 1988
A;Title: Nucleotide sequence of the maltohexaose-producing amylase
A;Reference number: A27705; MUID:88162814; PMID:3258152
A;Accession: A27705 A;Cross-references: GB:M18862; NID:g142496; PIDN:AAA22231.1; PID:g142497
A;Experimental source: chromosomal DNA of strain 707
A;Note: amino end of mature protein also determined
C;Comment: This is the smallest of five starch-hydrolyzing enzymes from thi
C;Function:
A;Description: catalyzes the hydrolysis of internal 1,4-alpha-D-glucosidic A; Molecule type: DNA A; Residues: 1-518 < TSU>

18-Jun-1999
